

BOA presents:

the first frequency controlled eco-line baling press!

BOA Recycling Equipment BV, is amongs others, a supplier of high-quality baling presses, bag openers and sorting equipment.

We are proud to present you, our baling press of type Eco-line Impress M75. This further developed baling press with a prepress flap is equipped with a frequency-controlled main

pump to save energy. Because of this, the piercing device is electrically controlled by means of a servo motor instead of hydraulically and the pressure of the baling press will be regulated independently.

This type of baling press will be available from October 2012.

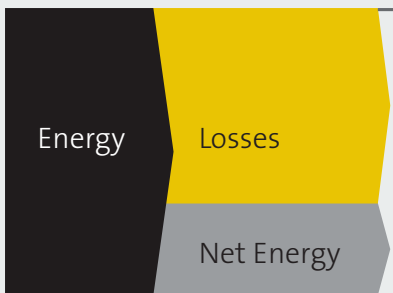

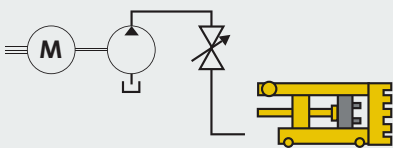

BOA presents:

the first frequency controlled eco-line baling press!

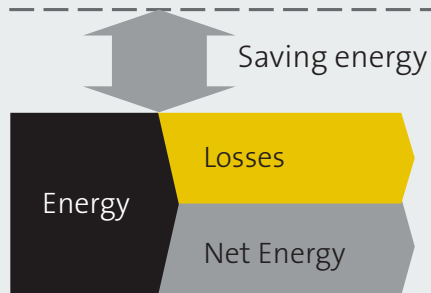

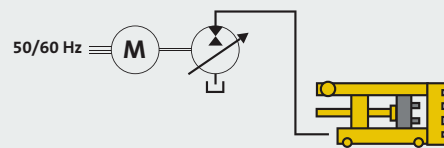

Saving Energy

1. Fixed pump, constant speed

- Very high losses at smothering in partial load
- Energy losses at keeping pressure

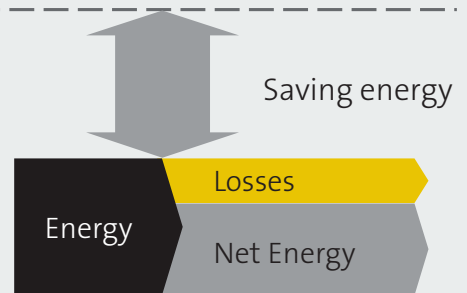

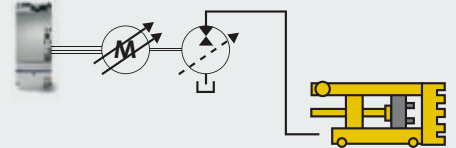

1. Variable pump, constant speed

- No losses at smothering
- Reduction of energy consumption at keeping pressure

→ Saving up to 50%

3. Fixed-/variable pump, variable speed

- Minimal energy consumption at keeping pressure

→ Saving up to 80%
